# **Umnini Digital Boundaries Software Development Plan**

# ## 1. Project Overview

Umnini Digital Boundaries is a web application designed to digitize and manage home boundaries online.

The system will have a hierarchical land mapping structure, interactive maps, user profiles, land search, update request features, and legal documentation upload.

### ## 2. Requirements

## ### Functional Requirements

- 1. \*\*User Authentication and Authorization\*\*
  - Users can register and log in.
- Different user roles: Inkosi (Chief), Induna (Headman), and Homeowner.
  - Role-based access control.

# 2. \*\*Interactive Map\*\*

- Users can view and edit property boundaries.
- Ability to toggle traffic layers.
- Zoom functionality to navigate through Izizwe, Izigodi, and Imizi.

#### 3. \*\*User Profiles\*\*

- Profile management for different user roles.
- Role-specific functionalities and access permissions.
- 4. \*\*Land Search and Update Requests\*\*
  - Search for land by name, ID, or coordinates.
  - Submit requests for boundary updates.

# 5. \*\*Legal Documentation Upload\*\*

- Upload legal documents to verify land ownership.
- Secure storage of uploaded documents.
- 6. \*\*Drone & GIS Integration\*\*
  - Use drone imagery to map land plots.
  - Al-assisted refinement of property boundaries.

#### ### Non-Functional Requirements

- 1. \*\*Performance\*\*: Fast loading maps and data processing.
- 2. \*\*Security\*\*: Secure authentication, encryption, and audits.
- 3. \*\*Usability\*\*: Intuitive UI, mobile-friendly, and accessible.
- 4. \*\*Scalability\*\*: Handle large data and user base efficiently.

### ## 3. System Architecture

#### ### High-Level Architecture

- \*\*Frontend\*\*: React, Tailwind CSS
- \*\*Backend\*\*: Node.js, Express.js
- \*\*Database\*\*: MongoDB
- \*\*Authentication\*\*: JWT (JSON Web Tokens)
- \*\*Map Integration\*\*: Google Maps API
- \*\*Drone & GIS Data\*\*: Al-assisted land mapping

### ## 4. Development Plan

#### ### Milestones & Timeline

- 1. \*\*Project Setup & Basic Structure\*\* (2 weeks)
- 2. \*\*User Authentication & Authorization\*\* (3 weeks)
- 3. \*\*Interactive Map Integration\*\* (4 weeks)
- 4. \*\*User Profiles & Access Control\*\* (3 weeks)
- 5. \*\*Land Search & Update Requests\*\* (3 weeks)
- 6. \*\*Legal Documentation Upload\*\* (2 weeks)
- 7. \*\*Drone & GIS Integration\*\* (4 weeks)
- 8. \*\*Testing & Quality Assurance\*\* (4 weeks)

# 9. \*\*Deployment & Launch\*\* (2 weeks)

# ### Development Workflow

- \*\*Version Control\*\*: Git
- \*\*Project Management\*\*: Jira
- \*\*CI/CD\*\*: GitHub Actions
- \*\*Testing Tools\*\*: Jest, Cypress, OWASP ZAP

### ## 5. Deployment Plan

#### ### Infrastructure

- \*\*Hosting\*\*: AWS (EC2, S3)
- \*\*Database\*\*: MongoDB Atlas
- \*\*CI/CD\*\*: GitHub Actions

#### ### Deployment Steps

- 1. Set up AWS & MongoDB Atlas
- 2. Configure CI/CD pipeline
- 3. Deploy backend, frontend, and database
- 4. Monitor & maintain

# ## 6. Maintenance & Support

- \*\*Monitoring\*\*: New Relic, Datadog
- \*\*Error Tracking\*\*: Sentry
- \*\*Security Updates\*\*: Regular patches and audits
- \*\*User Support\*\*: Help desk and documentation

#### ## 7. Conclusion

This development plan provides a roadmap for building Umnini Digital Boundaries, integrating traditional land governance with modern technology.
